San Jose, CA

Summary

Software engineer with 4+ years of experience building features end to end — React/Next.js/Angular UI through Python, FastAPI services, SQL databases, and LLM eval pipelines. Recently focused on production AI: LLM integration, RAG, MCP, agentic workflows, and human-in-the-loop automation.

Experience

Software Engineer — El Paso Labs

Apr 2024 – Present

- Revived a stalled Python-based multi-agent AI workflow that reads each Front email and decides whether a task needs to be created in Airtable. Added a human-in-the-loop Slack approval step — including approval/rejection, free-text edits, intent classification, and inline clarification with Pydantic-enforced structured LLM output — and shipped to beta with positive client feedback.
- Built an offline evaluation pipeline with deterministic scorers using Langfuse, tuning scoring to a 0.8 quality threshold to block LLM regressions before deployment.
- Developed an Angular + Python/FastAPI + PostgreSQL RAG dashboard integrating Azure AI Search and Azure Blob Storage for document ingestion, vector search, and embeddings — unifying web-crawled content and Zendesk data into a single searchable knowledge base.
- Delivered a configurable merchant onboarding flow builder for PXP (fintech partner) — a questionnaire-driven tool that let admins set up onboarding flows, with requirements branching by merchant risk level.
- Created a reusable Angular component library for PXP partner portal with design tokens and form components to power the onboarding UI, and built REST API integrations to connect to .NET backend services.
- Collaborated directly with stakeholders to translate business requirements into technical solutions, ensuring high-quality delivery and alignment with project goals.

Full Stack Software Engineer — Independent Consultant

May 2023 – Mar 2024

- Developed front-end features and Sanity CMS integrations for two corporate client websites built with Next.js and Tailwind CSS, working within a small team.

Software Engineer — Intergalactic Agency Inc.

Apr 2021 – Aug 2023

- Owned QA across 6+ client React/Next.js/TypeScript projects — built automated Cypress test suites and investigated defects using browser dev tools, helping improve release quality and catch defects before they reached production.
- Led User Acceptance Testing (UAT) to ensure solutions met both functional and technical standards.
- Transitioned into development by reading through source code to trace root causes, reproducing issues, and partnering with developers on fixes.
- Built a Puppeteer automation on AWS Lambda, EventBridge-scheduled every 3 days, that logs into a client's Mosyle MDM dashboard, exports iPad app-usage logs through the admin UI, reshapes the data into a custom 'which iPads used which apps' report, uploads it to S3, and emails the client a link — eliminating a 100% manual reporting process.

Skills

AI & Backend: Python · Pydantic · FastAPI · FastMCP · LLM Integration · LLM Evals · Agentic Workflows · RAG · Embeddings · Workflow Orchestration · Azure AI Search · LangGraph · Langfuse · REST APIs · SQL
Frontend: React · Angular · Next.js · TypeScript · JavaScript · Tailwind CSS · HTML5 · CSS · Sass · Figma
Tools: Claude Code · Git · GitHub Actions · CI/CD · AWS · Azure · Docker · Puppeteer · Playwright

Education

BrainStation — Diploma in Web Development	2023
Hitek Computer School — Certificate in Software QA & Testing	2021
Belarusian State University — Diploma in Software Engineering	2020
Perm State Pedagogical University — Master's degree, Linguistics	2012
