Summary

Software Engineer with 4+ years of experience in frontend development (React, Angular, Next.js) and full-stack engineering with Python, FastAPI, FastMCP, and SQL. Recently focused on building production AI systems, including production LLM integrations, RAG, MCP, multi-agent workflows, and human-in-the-loop automation.

Experience

Software Engineer — PXP | El Paso Labs

Apr 2024 – Jul 2026

- Revived a stalled multi-agent AI workflow that integrates Front emails, Pydantic-enforced 4-way intent classification (approve/reject/edit/unclear), and a human-in-the-loop Slack approval step to automate Airtable task creation, reducing manual task-creation effort by ~85% and successfully deploying it from beta to production after gathering positive client feedback.
- Built an offline evaluation pipeline in Langfuse with 28 deterministic scorers plus an optional LLM-as-judge layer (relevance/correctness scoring) across 6 LLM agents, backed by 90 golden eval datasets, tuned to a 0.8 pass-rate gate designed to block LLM regressions pre-deployment.
- Delivered a customizable merchant onboarding flow builder with Angular for the PXP Partner Portal, a questionnaire-driven tool letting admins configure onboarding requirements across 2 merchant risk tiers, replacing a fixed, one-size-fits-all flow and reducing low-risk merchant onboarding time, making the process nearly 2x faster.
- Developed a RAG Dashboard powering PXP's Partner Portal chatbot: a Python + FastAPI + PostgreSQL backend, component-based Angular frontend, and dual-engine web crawler unifying web and Zendesk data into an Azure AI Search knowledge base.
- Built a reusable Angular component library (25+ components) with design tokens powering the onboarding UI, and implemented REST API integrations with .NET backend services, becoming the top contributor by code volume among 12 engineers on the codebase (~36%).
- Collaborated directly with client stakeholders to translate business requirements into technical solutions, ensuring alignment with project goals and high-quality delivery.

Full Stack Software Engineer — Independent Consultant

May 2023 – Mar 2024

- Developed frontend features and Sanity CMS integrations for 2 corporate client websites built with Next.js and Tailwind CSS, working within a small team.

Software Engineer — Intergalactic Agency Inc.

Apr 2021 – Aug 2023

- Owned QA across 6+ client React/Next.js/TypeScript projects, built automated Cypress test suites, and investigated defects using browser dev tools, helping improve release quality and catch defects before they reached production.
- Transitioned into development by reading through source code to trace root causes, reproducing issues, and partnering with developers on fixes.
- Built a Puppeteer automation on AWS Lambda, EventBridge-scheduled every 3 days, that logs into a client's Mosyle MDM dashboard, exports iPad app-usage logs through the admin UI, reshapes the data into a custom report, uploads it to S3, and emails the client a link, eliminating 100% of the manual reporting process.

Skills

AI & Backend: Python · Pydantic · FastAPI · FastMCP · LLM Evals · Agentic Workflows · RAG · Azure AI Search · LangGraph · Langfuse · REST APIs · SQL

Frontend: React · Angular · Next.js · TypeScript · JavaScript · Tailwind CSS · HTML5 · CSS · Sass · Figma

Tools: Claude Code · Git · GitHub Actions · CI/CD · AWS · Azure · Docker · Puppeteer · Playwright

Education

BrainStation — Diploma in Web Development

2023

Hitek Computer School — Certificate in Software QA & Testing

2021

Belarusian State University — Diploma in Software Engineering

2020

Perm State Pedagogical University — Master's Degree in Linguistics

2012
